**EMME COURSES**

**DETAILED PROJECT DESCRIPTION**

As a representative of INRO Consultants, the main distributor of EMME tools in the Middle East, TMS Consult conducts EMME training courses in accordance with INRO's guidelines. This beginner/intermediate level course is completely revised and conducted over 5 days. The first session provides a general overview of the EMME approach and software, including its concepts, functions, limitations, applicability, strengths, and weaknesses, along with common transportation planning tasks. The second session focuses on modelling supply and demand, covering the characterization of components, database creation (data input and result management), parameters, and the interface with graphic tools. The third and final session is dedicated to assignments, simulations, and calibration, including mono-modal, split-modal, toll roads, master plans, circulation plans, and performance indicators. TMS Consult also provides technical assistance to engineers.

**SERVICES PROVIDED**

- Training EMME courses
- Applications in urban and interurban contexts
- Technical assistance for modelling and calibration of projects with EMME tools
- Assistance in traffic counts, OD surveys and stated preference surveys
