INTERNAL CIRCULATION PLAN - PORT OF BEIRUT

DETAILED PROJECT DESCRIPTION

The study examined the current situation of Beirut Port, including internal circulation, access points, and land distribution. A conceptual design was proposed and discussed with the port authority. Upon approval, tender documents, specifications, and detailed drawings of the adopted solution were prepared for construction companies. The study included the internal conceptual design, signage and marking design, gates and fences, as well as the overall conceptual design.

SERVICES PROVIDED

- Traffic surveys, field operation and results analysis.
- Conceptual design for internal circulation, port land distribution and activities
- Tender documents
