TRAFFIC STUDY FOR TOLL MOTORWAY IN ALGERIA

DETAILED PROJECT DESCRIPTION

Definition of a reference case for the central corridor (Khémis Méliana – Bourj Arréidj and Constantine Bypass – approximately 300 km), including traffic and revenue forecasts for a future toll highway. Data analysis, assembly of OD matrices, and calibration of the base case (year 2003); analysis of tariff policy and proposal of optimization scenarios.

Recommendations for the implementation plan in the long and medium terms.

SERVICES PROVIDED

- Traffic Modelling
- Analysis of the current situation
- Elaboration of a toll system
- Tarif policy by type of vehicle
