EMME COURSES

DETAILED PROJECT DESCRIPTION

As a representative of INRO Consultants and main distributor of the EMME tools in the Middle East, TMS Consult conducts EMME training courses in compliance with INRO general rules. This is a completely revised beginner/intermediate level course in three sessions.

The first session covers a general presentation of the approach and software (EMME) concept, functions, limitations, applicability, strengths /weaknesses, along with a series of common transportation planning tasks. The second session focuses on modelling of supply and demand: characterization of supply components of supply and constitution of data bases (data input and results management) parameters as well as the interface with its graphic tools. The third and final session deals with the assignments, simulations and calibration: mono-modal, split modal, toll roads, master plan, circulation plan and performance indicators.

TMS Consult is also committed to provide technical assistance to engineers.

SERVICES PROVIDED

- Training EMME courses
- Applications in urban and interurban contexts
- Technical assistance for modelling and calibration of projects with EMME tools
- Assistance in traffic counts, OD surveys and stated preference surveys
