TRAFFIC STUDY ANALYSIS - LIQUIDITY & OYSTER

DETAILED PROJECT DESCRIPTION

The project was approximately 1,7 million sqm. The aim of the study was to assess traffic flows attraction and generation inside the project and to develop alternatives for the road network. An assessment comparison of the performance of each proposed alternative was made, taking into account main indicators such as accessibility, level at service of intersections, and the traffic management system.

An evaluation of the project's impact on surrounding intersections was carried out and mitigation measures for the existing network were recommended.

SERVICES PROVIDED

- Forecasts of attracted/generated traffic flows
- Traffic assignment
- Road design concept
- Parking access
- Traffic regulation
